

**GRIFFON** 

**GRIFFON** DEVICE FOR PROCESSING  
FOOD WASTE / SCRAPS

**On site  
food waste  
management**

**No landfills. No transport.  
No unpleasant smells and pests.**

**GOOD FOR  
BUSINESS,  
GOOD FOR THE  
ENVIRONMENT**

# IS THERE A BETTER WAY TO MANAGE FOOD WASTE?

We know there is.

Food waste is a global issue today, directly linked with environmental, economic and social impacts. Some studies estimate that in the EU, total food waste per year is at around **88 million tonnes**. Despite the ban, a great number of food scraps ends up at landfills, instead at biogas plants/composting facilities. Trucks transporting food waste emit carbon dioxide. Landfills emit methane and strained waters which end in our waterways.

This just shows the magnitude of the problem. And the problem is increasing.

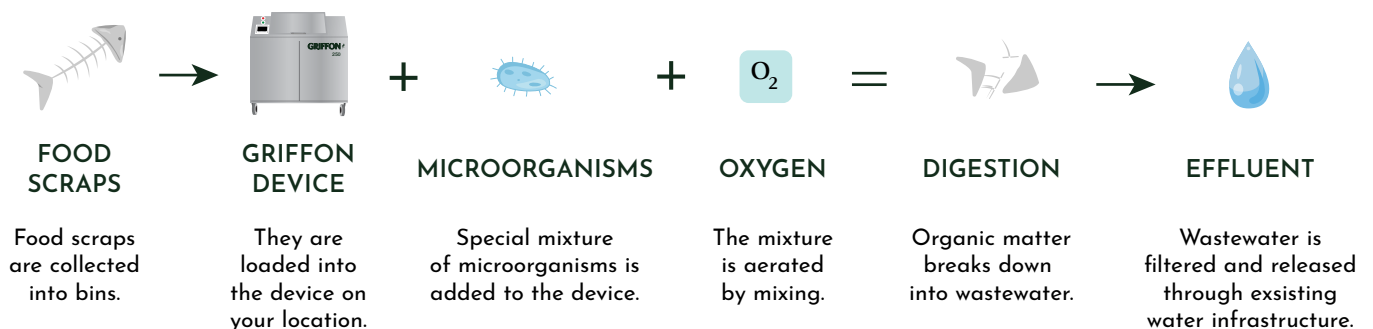

We're on a mission to change that. Our **Griffon** devices allow you to dispose food scraps **immediately on site**. In your restaurant, hotel, and any business involving food preparation.

**No landfills. No transport. No unpleasant smells and pests. Better for your staff, your customers and your business.**

## HOW DOES THE GRIFFON DEVICE WORK?

Just like people and animals chew food and it breaks down through the process of digestion, our devices also chop food scraps and break them down through the process of aerobic digestion.

Is it better to process food scraps immediately on your location or send food waste for further disposal, most often to landfills?

**Much better. Much easier. Legally compliant.**

Processing food scraps immediately at your location is more financially profitable and brings benefits both for nature and society - your customers will perceive you as a socially responsible company and a sustainable business.

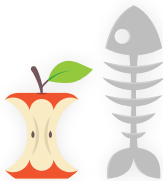

**No unpleasant odors which attract flies and rodents.**

**No transport of waste. Reduced emissions of CO<sub>2</sub>.**

**No methane emitted from landfills. No leaching to waterways.**

**Reduced amounts of food waste. Reduced charges.**

**No warehouses, reduced administration.**

**Do more for the environment and your business.**

## Who are we?

We produce **Griffon** devices for handling food scraps in the European Union.

Lack of green solutions to take care of food waste and the need of companies in Croatia to address the problem of food waste, encouraged us to explore European and global practices in solving food waste. Thus, after studying biodigester technology in cooperation with foreign associates, we developed our own formula of microorganisms and enzymes for the breakdown of food scraps and we designed the Griffon device, which greatly reduces the amount of food waste.

**We have decided to take care of our planet  
and future generations to come.**

**Join us.**
